

SOLUTION OVERVIEW

# OpenText Axcelerate Automated Translation

Automatically translate documents via integration with AWS™ Translate or Veritone™ aiWARE™ to standardize review in English

**Identify and translate:** Automated best-in-class translations for over 70 languages including CJK

**Simple and seamless:** Manage translation jobs inside of OpenText™ Axcelerate™

**Secure:** Only text is extracted; native files stay within client environment

**Pricing:** Flexible and inexpensive pricing varies by volume.

**Global litigation and commerce are multilingual, but reviewing those documents for eDiscovery, compliance or investigation purposes across numerous languages can be difficult. Non-English documents must be isolated and batched to native speaking document reviewers. This can be costly and slows down the review and analysis process.**

Automating the translation process with a consistent, machine-powered translation engine streamlines document review, reduces costs and standardizes interpretations. OpenText™ Axcelerate™ simplifies the handling of multilingual documents through integrations with AWS Translate and Veritone aiWARE. Both of these services use advanced machine learning within their translation algorithms for exceptional accuracy.

## Identify and translate

Identify and translate over 70 different languages into English. Machine-powered translations are consistent, secure and automated, eliminating inconsistencies among human translators.

## Simple and seamless

Data selected for translation is securely transferred to and from the translation service provider and Axcelerate, with the translated text available as a separate view on the native-language data.

## Secure

Data is securely transferred from application-to-application without any exposure to intermediaries or third-parties. Native files are never moved outside of the Axcelerate platform. Just the text is extracted and sent to the translation service chosen by the client. The translated text is returned and correlated within Axcelerate to sit beside the native-language data to aid review.

Axcelerate Private Cloud, Axcelerate OnDemand, AWS Translate and Veritone aiWARE all operate on AWS data centers. Extracted text is exported from Axcelerate and the translated text is automatically loaded back in, but data will typically stay within the local AWS data center environment. The exception is for clients in Germany and Ireland using Veritone aiWARE. AWS Translate is hosted in all data centers where Axcelerate is hosted but Veritone aiWARE is only hosted in the AWS U.S. and U.K. data centers.

## Pricing

AWS Translate: Pricing is negotiated with Axcelerate client representatives and varies by the volume of data that is translated.

Veritone aiWARE: Axcelerate includes the Veritone integration at no cost. Axcelerate clients are required to subscribe directly with Veritone to enable sending translation jobs to their service.

## About OpenText

OpenText, The Information Company, enables organizations to gain insight through market leading information management solutions, on-premises or in the cloud. For more information about OpenText (NASDAQ: OTEX, TSX: OTEX) visit: [opentext.com](https://www.opentext.com).
